DataEye™ & ProcessEye™

In your manufacturing process, there is a substantial amount of data behind every part you make. We want to help you convert that data into better results. Using this data will help you maximize your performance and achieve a leaner operation

DataEye™ monitors points and allows you to set goals for each run and process. DataEye™ comes preloaded with any HMI Upgrade.

ProcessEye™ is a real-time data historian. A graphical presentation of data points chosen specific to your machine and your process shown on the HMI. The data is saved on the hard drive by date and time. Graphs can be overlaid to evaluate process consistency. The saved data can be easily loaded into a spreadsheet for even further evaluation.

Benefits

- ✓ Low cost
- ✓ View data in real time
- ✓ Configured for your machine
- ✓ Improve product quality
- ✓ Increase production
- ✓ Decrease unplanned downtime

Tech Specs Will record 10 Events/Second with up to 15 Tags

ProcessEye™ Features

Overlaid Graphical Trends

To evaluate process consistency you can overlay current and past graphs to analyze data. This feature will help to fix and eliminate process problems.

Zoom & Data Line View

With data line viewing capability, ProcessEye™ allows you to zoom in on critical data points in your process. This data will be shown in a viewing window on your screen.

Excel Analysis

This data can be easily imported to an excel CSV file and loaded onto a spreadsheet for more in-depth evaluation of your process.
